

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is a device constructed out of top quality materials intended to be able to withstand the most demanding procedures and work environments. This piece of equipment could enable the person driving to be able to control the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the arms or the entire load in order to facilitate more accurate carrying and position in a faster and more efficient manner.

The only one of its kind fork pocket design enables the individual operating it to safely swing the unit's blades without any fear of destroying the positioning cylinders. This could allow the operator the choice to either execute simultaneous or independent fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages could be converted into blade positioners on existing units.
